## NATIONAL VICTORY GARDEN CONFERENCE

. . . Any program for the development of gardens for victory must include the growing of trees, shrubs and flowers for the health of the mind, as well as vegetables for the health of the body, because ornamental gardening is a vital and absolutely essential part of American life today, and its value as a stimulus to national, physical and spiritual well being is beyond calculation. The conservation and expansion of the home garden is, therefore, a goal that must be maintained.

It has already been pointed out by the Secretary of Agriculture that, in urban areas particularly, growing flowers and shrubs seem wiser than to tear up yards and playgrounds for the sake of trying to grow a few vegetables as was done during the last war.

It is the view of this committee that the facilities offered .by this broad framework should be utilized to encourage in every feasible way those phases of gardening which deal with flowers, shrubs, trees and other plants that are essentially ornamental in character. By assigning these to their proper and justified place in the whole gardening for victory plan the full potentialities and benefits of the national plan can best be attained.

### EMPIRE PEAT SOIL SPONGE

Invariably the addition of peat moss or similar organic material will improve the physical condition of soil. Careful tests of many products resulted in the selection of this soil sponge. Its advantages are many—it binds sandy soil—loosens clay soils and is extremely useful as a mulch or top dressing. Furthermore, it increases soil bacteria and releases the necessary nitrogen essential to plant growth—stimulates root growth—provides drainage and prevents water logging, but conserves moisture. Being well seasoned and correctly ground it is ready for immediate use.

One cubic yard will cover 1200 square feet to a thickness of approximately  $\frac{1}{4}$  inch.
